Ahead of Launch Schedule

This week's Progress

Despite the weather, Team 5010 has still completed much with little left to be done. Being ahead of schedule in fact. Field team finished the rocket, cargo ship, and habitat. They are now starting to work on the human exchange, estimated to be finished in two days. If anything breaks, they also have spare parts for if something should break. The lift team has wired the lift, changed the pulley, and tested the systems and motors. Right now they are currently adding springs this week. Meanwhile programming has got motion profiling started, and fine tuned vision. The Drive Train has been completed, and fabrication has competition bot parts fabricated.

Parent Night Rescheduled & First Competition

Team 5010 still Planning on Attending

While Parent night for 8th grade parents was cancelled last Wednesday due to the Polar Vortex, it has been rescheduled for Wednesday the 6th. Rest assured, FHS Robotics will still plan be there to inform guardians about Team 5010.

First match at Jefferson High School

While we are nearing the completion of our competition robots with a little more than two weeks left of build season, our first match is around the corner at Jefferson High School in Lafayette on March 23 & 24. While it seems like it's an entire month away, time does fly fast. We would love to see you all out their supporting us.
