Build Season At An End!

The Past Six Weeks

Ever since Kickoff, we have been working around the clock to create the perfect competitive machine for this year's competition. The design itself has changed since the brainstorming session during the first week. For example, the bird beak design has been changed multiple times throughout build season. Originally it was made of plexiglass, and then changed to aluminum because it was a stronger material than the former. Another change was changing the image from looking like a triangular beak to looking like a rectangular beak. For now, we're in testing mode and fixing minor and major bugs until March 23rd when our first competition starts.

STEM Night Success!

Team 5010 Inspires

About two Wednesdays ago, Team 5010 visited Brook School Elementary for a STEM night. Our student leaders helped mentor the elementary students. The kids drove the STEM bot and were very excited to use the camera on it. Then on Saturday, we visited Riverside Junior High Robotics team in a tournament in Noblesville. Overall, a great night for science and engineering!

We Thank You for Your Support and We Hope to Stay in Contact to Update You on What 5010 is up to!
